

Emergency — Run StickIt from a Mac

Only if BOTH StickIt boxes are dead (R9). Full doc: docs/VENUE_MAC_FALLBACK.md

1 On the Mac, install Node.js if needed (nodejs.org, LTS).

2 Get the StickIt code onto the Mac.

From GitHub (github.com/ddreitlein-gif/StickIt !' Code !' Download ZIP) or the kit USB stick. Unzip it.

3 Open Terminal, then run (one line at a time):

```
cd ~/Downloads/StickIt-*/server  
npm install  
STICKIT_MODE=venue node index.js
```

4 Find the Mac's network address.

System Settings !' Wi-Fi/Ethernet !' Details !' IP address, e.g. 192.168.1.77. Tablets go to http:// THAT-ADDRESS:3001 (write it on the stand card — stickit.local does not point at the Mac).

5 Adopt the meet exactly as on Run Sheet 2.

Keep the Mac plugged in, lid open, and set Energy/Lock Screen so it never sleeps.

The Terminal window must stay open all day — closing it stops scoring.
