

Run Sheet 4 — Livestream (YoloBox)

The score overlay for the stream. Set once, check each morning.

1 On the tablet menu, open Connection Info.

It shows the overlay address as a number, like `http://192.168.1.50:3001/overlay`

2 Check the YoloBox browser/web source uses EXACTLY that address.

UniFi venue: it is stored from last time and the number never changes — just confirm. Starlink-router venue: the number can change — fix it if different.

3 The overlay follows the action by itself.

It always shows the athlete on course, in whichever event is running. The scoring computer can pin it to one event if the broadcast needs that (Scoring tab ! "Pin overlay to this event").

The overlay is transparent — if the stream shows a black screen instead of the video with scores on top, the YoloBox source type is wrong (needs the web/browser overlay source), not StickIt.
