

Run Sheet 1 — Kit Setup

Morning of the event, before anyone scores. Takes about 5 minutes.

- 1 Plug the StickIt box (Raspberry Pi) into power and the network.**
UniFi venue: any LAN port on the venue router. Starlink-router venue: one of the two Ethernet ports on the back of the Starlink router.
- 2 Plug the small USB backup stick into the StickIt box.**
It is labeled STICKIT-SNAP. The home screen warns you if it is missing — scoring still works without it.
- 3 Wait about one minute for the green light to settle.**
- 4 On any tablet, open Safari and go to <http://stickit.local:3001>**
You should see the StickIt Venue menu. If not: wait another minute, then pull the power plug, plug back in, try again.
- 5 The spare StickIt box stays in the kit bag.**
Only swap it in if the first box will not come up after two power cycles — then repeat from step 1 with the spare and use Run Sheet 2 to adopt the meet onto it.

Nothing to configure. The box remembers nothing between meets — Run Sheet 2 (Adopt the Meet) loads today's meet onto it.
