

STICKIT FREESTYLE SCORING

Event Secretary

Quick Start Guide

For: The person who sets up the meet beforehand and files results afterward

StickIt v1.29.00

Before the Meet (from home)

Everything here can be done days ahead, from any computer. Log in at the Officials page.

1

Create the meet

Officials dashboard > New Meet. Name, location, start date. Then open the meet and fill in the Course Specifications (course length and the USSS/FIS pace setting) — times can't be scored without them.

2

Add the events

One event per discipline + gender + day (e.g. "Comp Series Male Mogul"). Each discipline asks its own setup questions:

MOGULS

category, number of judges & jumps,
timed

DUAL MOGULS

bracket size, run-off to 4th or 8th place

AERIALS

event type, judge panel size, jumps

3

Assign the judges

Event > Setup tab > add each judge by name. The app creates a private web address for every judge seat — those links (on the Links tab) are what you hand to the judges and timekeeper on event morning.

CAREFUL

Pick the right category when creating an event (Comp Series, Devo, RQS-EQS, FIS). It sets the judge panel and scoring rules — changing it after scoring starts is not possible.

Getting Athletes In

Three ways into the registration list — use whichever fits what you were given:

1 Sync the USSS database first

Officials sidebar > USSS Database > Sync Now. Do this before every meet so names, membership numbers, birth years, and clubs fill in automatically.

2 Register the athletes

Event > Registration tab. Search the USSS list and tap to register, or upload the SkiReg CSV (it matches athletes by their USSS number and even brings bibs along).

3 Bibs, then run order

Use Assign Bibs for numbers, then Random Order or By Age Groups to build the run order. Red rows mean an athlete is missing required info — fix those first.

4 Lock the order

When the order is final, tap Lock Order. Late additions then ask where to slot in instead of reshuffling everyone.

Training Days & Meet-Day Handoff

1 Set up training days (optional)

Meet page > Training Days. Create one per session (name + date). Every registered athlete is included automatically — uncheck anyone who shouldn't train, then Print PDF for the on-hill roster.

2 Prepare the link sheet

Each event's Links tab lists the judge, head judge, timekeeper, and scoreboard addresses. Print or copy them so the Chief of Score can hand them out on event morning.

3 Hand off to the Chief of Score

On event day the Chief of Score runs everything live: starting runs, fixing scores, printing mid-day reports, late registrations and bib changes. You set the table; they serve the meal.

GOOD TO KNOW There is a separate Quick Start Guide for the Chief of Score — make sure whoever sits in that chair has it. The overlap is intentional: anything you set up, they can patch on the day.

TIP Working from home? Everything in this guide works over the internet on the live server — you do not need to be at the hill.

After the Meet (from home)

1 Check every event shows Complete

Open the meet — each event should say Complete. If one doesn't, the Chief of Score (or an admin) needs to finish it first.

2 Generate the USSS results file

Meet page > USSS Transmit. The app builds the official XML results file for each event. Upload it to USSS within the required window (usually 72 hours). Athletes who didn't start or finish are included automatically with the right status.

3 Export and archive the meet

Meet page > the More menu > Export Meet. You get a single file containing everything — every athlete, score, bracket, and training day. Keep it with your season records; it can be re-imported onto any StickIt server later.

IMPORTANT Transmit only after every event is Complete — a partial transmit means re-doing it.

TIP The export file is your insurance policy. One per meet, stored somewhere safe, and you can always rebuild.
